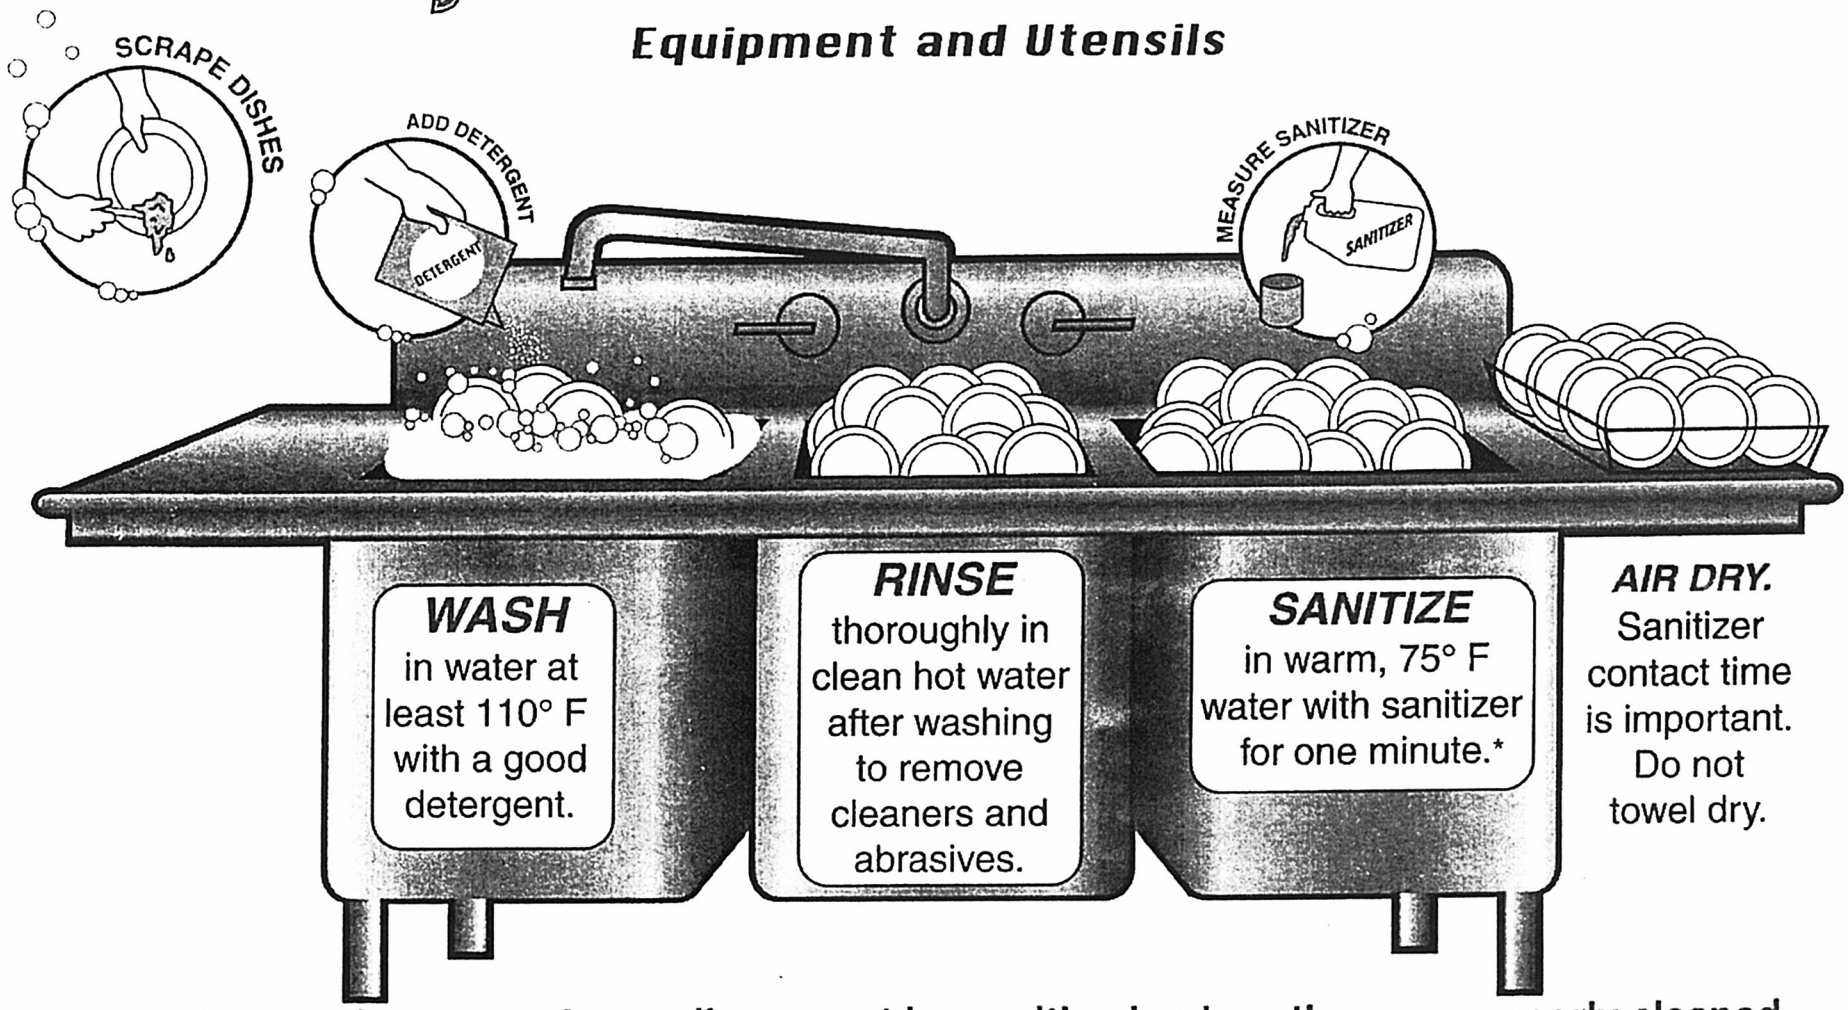
Steps to Manually

WASH, RINSE and SANITIZE

Equipment and Utensils



Remember, equipment and utensils can not be sanitized unless they are properly cleaned.

*Sanitize by completely immersing utensils for one minute in 75^{0}F water using an approved Chemical Sanitizer: **Chlorine**: Between 50 to 100 ppm OR **Iodine** at 12.5 ppm OR **Quaternary Ammonium** according to Manufacturer's instructions. The appropriate test kit for the chemical you are using must be available at all times to check concentrations. Change the solution in the Sanitizer compartment as often as necessary to maintain the correct chemical concentration.
